

FLAT JOINT TAPE ROLLER AND STRAIGHTENER

Ref. : 284955
Gencod 3476062849555
UPC: 1

2 in 1 = tighten and smooth flat joint tapes.
Made of stainless steel.
Equipped with a cone-shaped roller to uniformly distribute compound under the tape when tightening, as well as to evacuate excess compound from the sides of the tape.
A 125 mm stiff blade, integrated behind the roller, then allows a 1st smoothing and whitening of the tape (thin layer of compound).
Excess compound is then collected by the scraper sides, guaranteeing a reduced compound width (between 125 and 150 mm) to facilitate the 1st coat of the finishing box.
The 175 mm flexible blade mounted at the rear of the tool removes any remaining burrs of compound and finishes the edges of the tape.
The included rubber scraper support, to be positioned on the compound bucket (max. diameter 300 mm), is designed to wipe the 2 blades while returning excess compound directly into the bucket.
To be used with EDMA extendable handle ref. 284055, equipped with brake lever.
Supplied in carrying case with integrated foam protection.
